

Sustainability

Monitor and manage your
data the responsible way

With the construction industry contributing almost 40% to global carbon emissions, organisations are increasingly exposed to climate and other sustainability-related issues.

Governments around the world are encouraging (and in some cases mandating), regular reporting of sustainability metrics to comply with building codes and other regulatory standards.

Collecting and analysing this data can be complex, pulling data from a number of sources and presenting the information in spreadsheets or other forms.

An innovative solution for your responsible reporting requirements

Simplify and streamline your sustainability reporting.

Energy Monitoring

Sustainability Compliance

Water Monitoring

Workers Welfare Compliance

Waste Management

(In Country Value) ICV Compliance

Material Tracking

The cloud-based solution facilitates data collection and analysis, and the dynamic dashboards provide detailed monitoring and reporting to help reduce emissions. The holistic view of project and/or supply chain metrics allows organisations to proactively manage and improve their sustainability performance.

Fully compatible with ESTIDAMA, and UNSDG (United Nations Sustainable Development Goals) you have confidence that you are working in compliance with the latest standards.

Who can benefit from the solution?

Developers and Asset Owners monitoring large project portfolios

Contractors and sub-contractors seeking to monitor their environmental impact

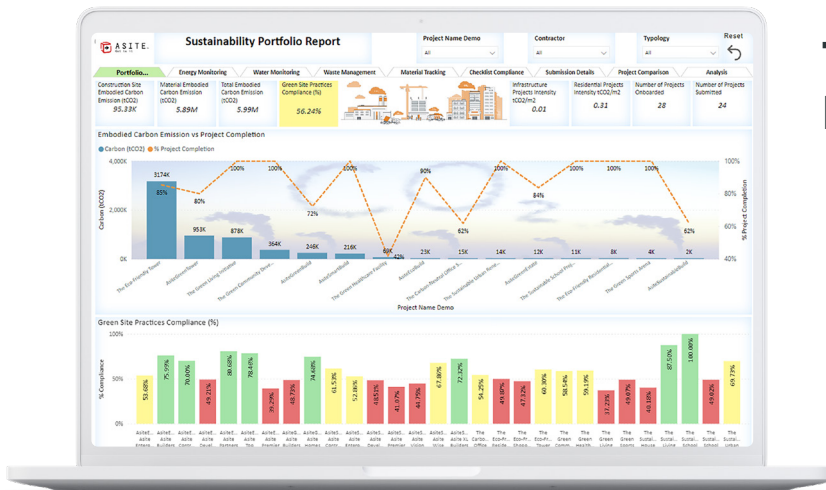

Sustainability Consultants searching for a tool to support their specialist advisory services.

Powering Aldar's sustainability reporting

Asite Sustainability has been the tool of choice for Aldar, to manage the reporting requirements of their project portfolio. It allowed them to:

- Measure carbon footprint set reduction targets, and award supply chain
- Ensure data accuracy and consistency among the large portfolio of projects
- Create real-time information on dashboards and generate periodic performance reports
- Make data-informed decisions

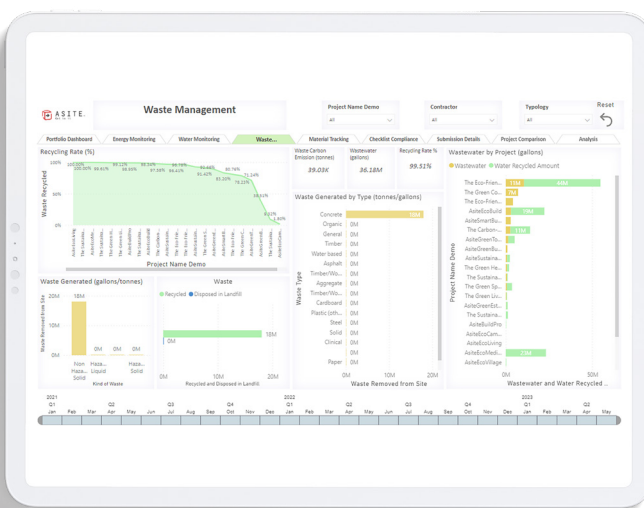

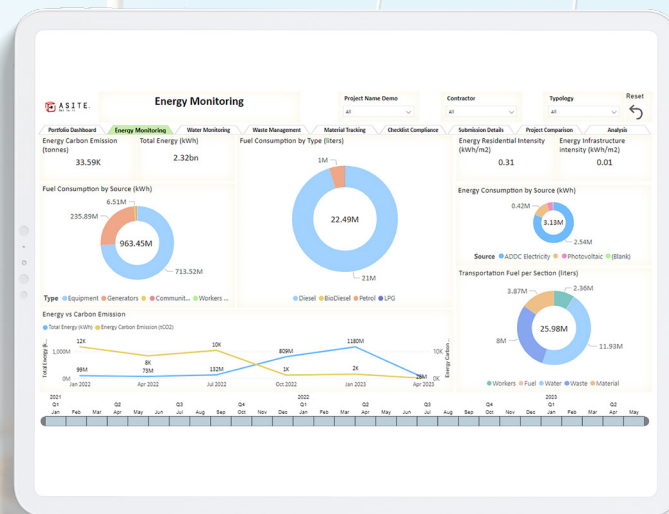

Track Carbon Emissions

Monitor Energy Consumption

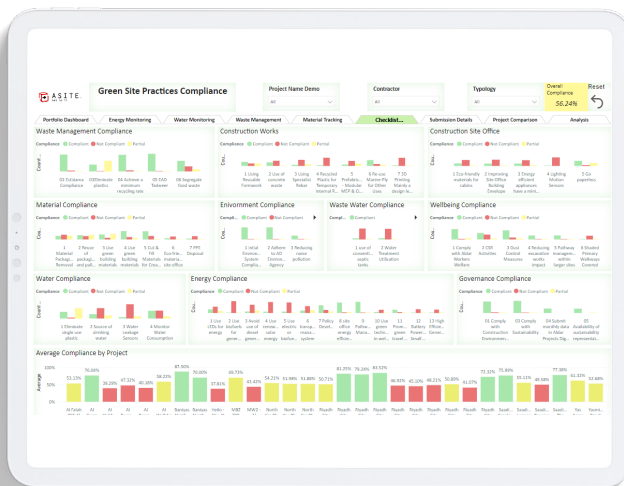

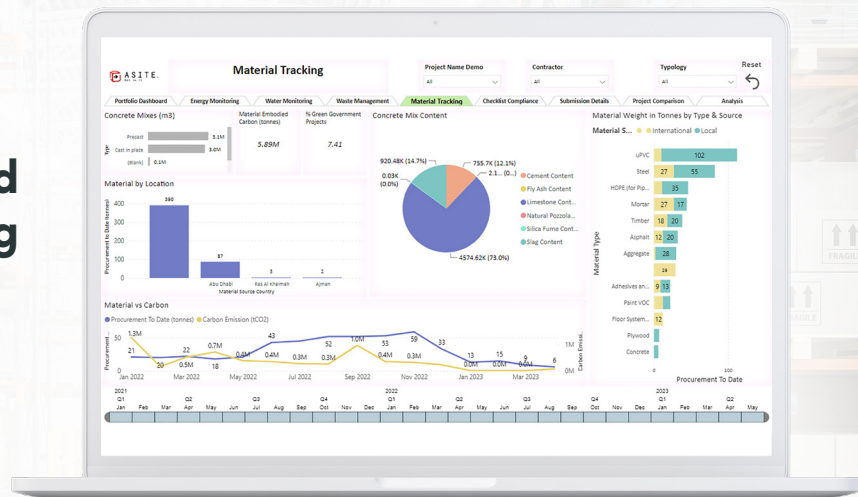

Evaluate Waste Management

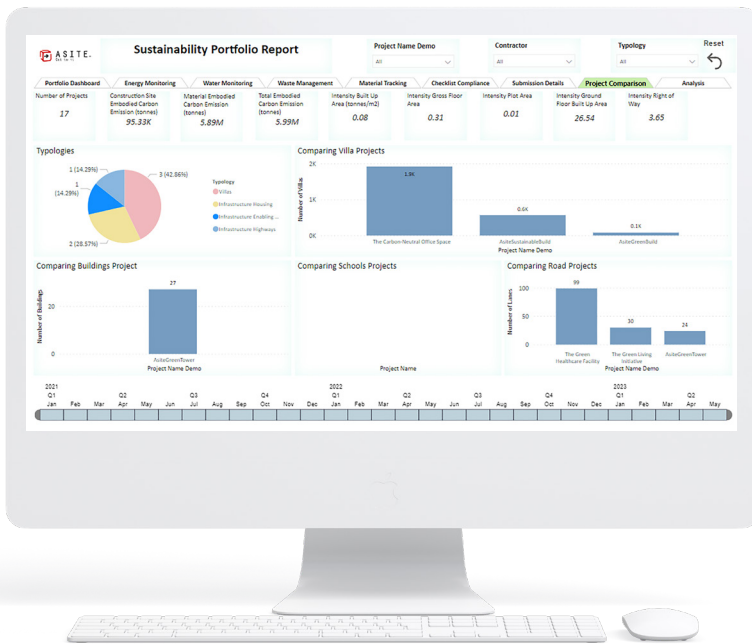

Proactive Water Monitoring

Detailed Material Tracking

Visibility of Supply Chain Compliance

Compare Project & Contractor Performance

Powered by Asite, the open construction platform that enables organizations working on capital projects to come together, plan, design, and build with seamless information sharing across the entire supply chain.

Since 2001, our global teams have delivered market-leading solutions to thousands of Architecture, Engineering & Construction (AEC) firms. Our platform brings together the physical, digital, and human into one open ecosystem. Our software helps organizations automate their collaborative processes, so they can deliver innovative projects.
